Profile

As a second year undergraduate student at Cardiff Metropolitan University - UK, I am familiar with various programming languages including Java, C++, and Python. Further, I completed a couple of academic projects and personal projects using multiple languages and technologies. I am always willing to learn different technologies.

Projects

Colombo Institute of Studies – CIS 1.0

Feb 2024

This is a HR management system. This project is an academic project and I built this GUI application for my OOP module. I used all the OOP concepts in this project such as inheritance, abstraction, polymorphism, and encapsulation etc. This project is based on Java swing.

BunTalk 1.0

Dec 2023

This is a billing system for a restaurant. This GUI application is a personal project and this is my first GUI application. I used java swing to build this project and I used derby database to store the information.

BunTalk 1.0 – Command Line Interface

Sep 2023

This is a billing system for the BunTalk restaurant. This is a CLI application and I built this academic project for my FIP module. Adding products, cashiers, searching products and printing bills can be pointed out as main functions in this project. I used C++ to build this command line interface project.

Nethra Bookshop – Command Line Interface

Jan 2024

This is the books management system of the Nethra bookshop. This project is a freelancing project. Adding, updating, deleting searching books and creating bills with discounts can be pointed out as the functions of this project. The project is based on C++.
